## Recommended Citation

Post, Grant. "Web Tools in Education." Poster presented at the First Year Experience Symposium, Western Oregon University, December 5, 2013.

This Poster is brought to you for free and open access by Digital Commons@WOU. It has been accepted for inclusion in First Year Experience Symposium by an authorized administrator of Digital Commons@WOU. For more information, please contact [digitalcommons@wou.edu](mailto:digitalcommons@wou.edu).

# Web Tools In Education

## Student Health 101

The student Health Assignment got us to go on the Western page and read an article from a while back about food. It made you start to think about how you really need to put forth effort to eat healthy because it can be a bad habit to change. It was a good way to start off the year.

## PowToon

PowToons was our first project. We made presentations on cheating. We first talked about what we thought cheating was and then we answered questions about the boundaries of cheating. PowToons was an easy website to use. Not too hard to surf and had great animations to use in your project.

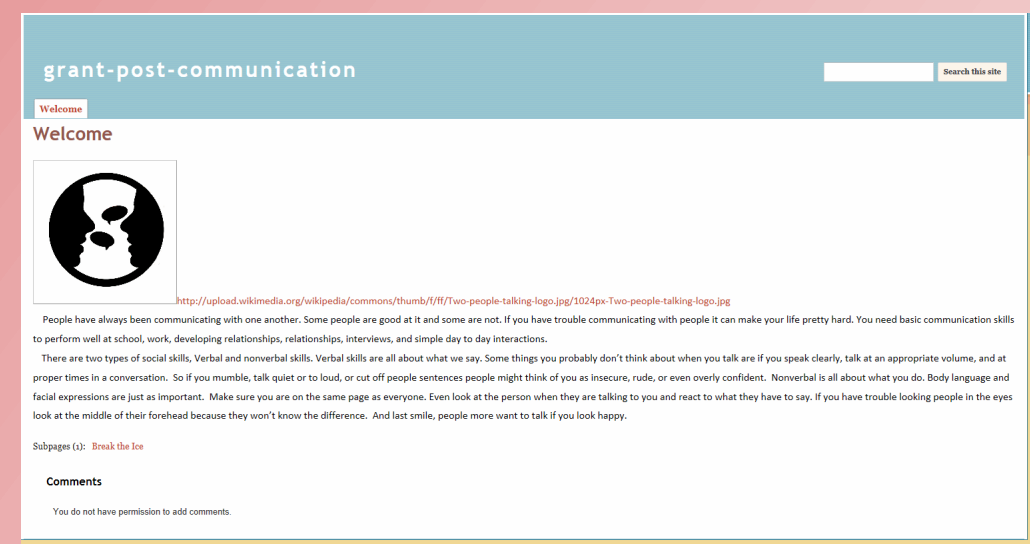

## Slideshare

For slideshare we got to pick our own topics to present to the class. The website was really easy to use because you would make the presentations in PowerPoint and then you uploaded it.

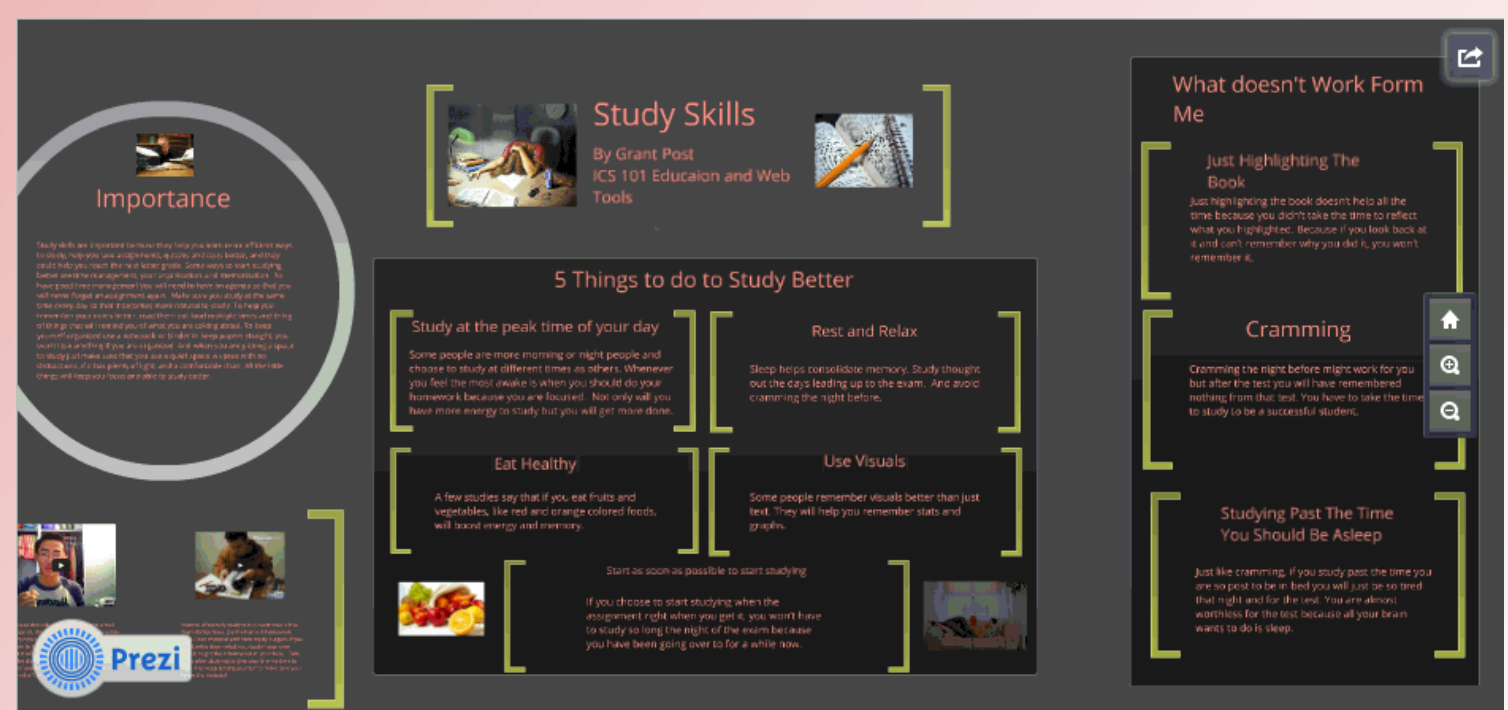

## Blended learning

Blended learning was a way for us to reflect on how we thought school was for us and how school is changing because of technology. Blended learning is becoming three category's mobile learning, classroom learning, and online learning.

## Google Sites

A Google site was a little more confusing than the other presentations in my opinion. Getting all the material for the site wasn't hard but I had trouble getting different tabs for new pages. It took me a while to get used to Google sites. We read articles about properly communicate with others.

## Prezi

Prezi is an interesting presentation tool. You can put your information anyway you want on the page. You could zoom in, zoom out, or even turn the whole presentation.

## Voicethread

Vociethread was probably the coolest presentation tool we used. You make your presentation in PowerPoint and then you can upload it straight in the website. Then you can add voice comments to present the project so you don't have to. You can also comment on others presentations. We could present on anything we wanted to.
